Reze-Lastic™ 2155

(Contains SDA-3C)

Reze-Lastic™ 2155 is a non-reactive thermoplastic polyurethane resin designed for use together with nitrocellulose in the production of solvent based flexographic and gravure flexible packaging inks/coatings.

Product Specifications	
Appearance	Clear
Solids Content (%)	75 ± 3
Viscosity (@ 25°C)	1,000 – 2,000 cP
Color (Gardner)	2 Max
Solvent	21% Ethyl Acetate 3.8 % Ethanol 0.2% Isopropanol

Key Features and Benefits

- ✓ Excellent crinkle resistance / flexibility and adhesion
- ✓ Slightly softer the Reze-Lastic™ 2166

F.D.A Status

Although there is no section directly referring to non-food contact inks, reference can be made to other sections of the F.D.A. The composition of Reze-Lastic™ 2155 conforms to the positive list of the American F.D.A. regulations, Chapter 21, Section 175-105 for laminating adhesives, where the ingredients are separated from the food by a functional barrier.

E.E.C. Status

The individual monomers used in the manufacture of Reze-Lastic™ 2155 are listed in the Plastics Directive, Section 1, Part1, 'Authorized Monomers.'

REACH Status

All reactants are REACH pre-registered and as directed to be registered. We have as needed joined the required SIEF's for the reactant. Our only European representative is Info-Care.
